

3.2.4 Pinger Module

Pinger module will allow you to ping or notify a number of services about your website updates. The services and search engines then will crawl and index your website, publishing your content and increasing your site's popularity.

You can control what updates you want your Pinger module to ping by activating it in each module. At the bottom of most modules you will see:

Connection of Module `>insert_module<` with Module Pinger

So just choose “yes” or “no”.

In the module, enter a list of ping servers you would like to ping with updates. Each one should start with new line:

Home
Output Modules
Input Modules
Test & Log
Modules Setup
Options
Logout
View site

Sitemap manager
Wordpress
Archiver
Pinger

Ping servers link list:

```
