

1.2 Installation Procedure

Please note! If you don't know how or don't want to install the script by yourself you can use our [SGW Installation Assistance](http://www.self-growing-websites.com/sgw-install.php) (<http://www.self-growing-websites.com/sgw-install.php>)

As soon as you have downloaded our zip archive with the script, unzip it to your desktop. You can do it with the help of www.winzip.com or www.winace.com

After that, upload the folder "sgw" to the root of your hosting account, using any ftp client (for example <http://www.cuteftp.com/>).

When you open sgw folder on your server, it should look like this:

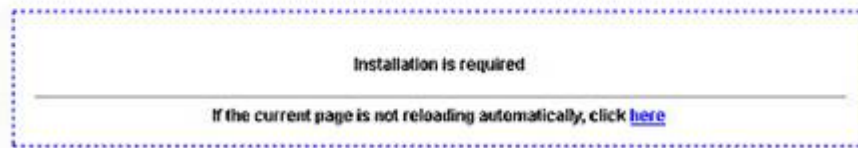

After that, open up your browser and type in the following:

`http://your_domain.com/sgw`

where “your_domain.com” is your actual domain name. You should see the following screen:

2 of 5

On the next screen, choose the interface language of your script (currently there are two languages available: English and Russian).

Click "**Continue**" button.

On the next screen, you will need to specify absolute path to your website, URL of your website and MySQL database information:

The configuration screen for SGW PRO 1.0. It features a header with the logo and title. Below the header, there are several input fields and sections:

- Absolute path to your website***: A text field containing "/home/timetov/public_html" with a blue question mark icon. Below it is a note: "Absolute path to your website without a closing slash, i.e. home/user/public_html (If you do installation on windows server don't forget to put c:/myfolder)".
- Virtual path (URL)***: A text field containing "http://www.timetovisit.com" with a blue question mark icon.
- S.G.W. Database Settings**: A section containing five input fields, each with a blue question mark icon:
 - DB HOST***: Empty field.
 - DB Name***: Empty field.
 - Tables prefix for SGW:**: Field containing "sgw_".
 - DB User Name***: Empty field.
 - DB User Password***: Empty field.

A red box highlights the blue question mark icons, with a red arrow pointing to them and the text: "click on blue question marks to see help for every element of the script".

At the bottom, there is a "Click to continue:" label and a "Continue..." button. A note at the bottom center says "*Symbol marks required fields".

Little blue question marks, next to each text field or element of the script will allow you to view additional detailed information.

Absolute path to your website should look like **/home/your_username/public_html** without closing slash "/" for Unix servers or **c:/yourfolder** for Windows servers.

Virtual path (URL) is your website's URL.

Don't put a closing slash after your URL ("/")!

Before installing the script you have to have a MySQL database setup on your server so you could specify the following MySQL database information:

DB HOST – usually it's *localhost*

DB Name - full name of your database

DB Username - user name that has full access privileges to your database.

DB User password – database password for that user.

Database can be created from the cpanel of your hosting account or by installing the WordPress blog (from Fantastico tab of your cpanel)

If you decide to install WordPress blog you can pull MySQL database information from the following wordpress file: **wp-config.php**

```
=====

// ** MySQL settings ** //

define ( 'DB_NAME' , 'XXXXXXXXXX' ); // The name of the database
define ( 'DB_USER' , 'XXXXXXXXXX' ); // Your MySQL username
define ( 'DB_PASSWORD' , 'XXXXXXXXXX' ); // ...and password
define ( 'DB_HOST' , 'localhost' ); // 99% chance you won't need to change this value

=====
```

After that, click **“Continue”**.

On the next page specify your SGW **admin login, email** and **password**.

Also you will need to provide your full name and email that you used for purchasing SGW in order to activate the script. That was made to prevent illegal distribution of SGW. **If you fail to provide correct information your script will not work!**

If you think that you provided correct information and you get a message that your script is not activated, please contact us at support@self-growing-websites.com

Click **“Continue”**. You should see the following screen:

SGW PRO 1.0 control panel

www.Self-Growing-Websites.com Advanced system of input and output modules

SGW engine v.1.0

Please enter your username and password to log in.

Username: admin

Password: ***
